Proposed GCP architecture

Managed web and app tiers • private data services • protected global HTTPS ingress

Official GCP icons • cloud.google.com/icons

Availability scope: automatic zonal SQL failover; region loss requires backup restore + redeploy to us-east1 (manual).

Solid arrows: request direction (responses reverse). Dotted: lookup / controls. Cloud Armor + Google edge provide L3/L4 DDoS defenses.

Assumptions: Linux containers; Redis durable records can be remapped to Firestore; SQL Server compatibility to validate. Production adds customer OIDC authorization.
